Basic feature

G90 is a portable 20W HF amateur radio transceiver with an SDR architecture with built-in auto antenna tuner. The display unit and the radio can be separated. It is a new member of the Xiegu product family and the first model of the G series.

24-bit data size @48kHz sampling rate, it has excellent transmit performance and a highly configurable function experience;

- High performance front end narrowband ESC preselector;
- Covers the frequency range of 0.5~30MHz, SSB/CW/AM/FM*1 three working modes;
- 1.8 inch high brightness color TFT LCD screen;
- ±24k bandwidth spectrum display, waterfall display;
- Software defined narrowband filter(CW mode: 50Hz);
- Detachable display unit;
- Up to 20W of RF power;
- Built-in wide range automatic antenna tuner;
- Diversified interfaces, in particular, the baseband I/Q output allows it to interface with any external device that can handle baseband I/Q, including sound card-based or PC-based applications such as XDT1.

In order to better experience this device, please read this manual carefully before use to fully understand the operation method of G90.

*1: The FM mode can only be turned on when the GSOC controller is used together.
Panel button

1  **Volume knob**
   - Turning, +/− the volume.
   - Short press, Switch to headphone output mode.

2  **Power/ Receive or transmitting status pilot lamp.**
   - Standby/receive status, showing yellow-green;
   - transmitting status, showing red;

3  **Power switch**
   - In the off state, press it to boot.
   - In the on state, hold press it to shut down.

4  **Multifunction adjustment Knob**
   - By default, turning this knob will stepping at 100 kHz.
   - Press and hold this knob to switch to the Select Custom function.

5~6  **Mode switching**
   Mode switching

7~8  **BAND Switching**
   Band switching

9  **FUNC pilot**
   This pilot will light when the second function of the button is operated.

10  **△F Pilot**

11  **Main Knob**
   Operating this knob will change the current frequency.
12 Function button

Button definitions and functions are detailed in the operation section.
Machine-head interface

20  **MIC Interface**  (On the right side of the machine-head)
Connecting the multi-function MIC to this connector.

21  **headphone interface**  (On the left side of the machine-head)
This 3.5mm stereo jack (3-pin) for connecting headphones.

22  **Self-defining(communication) interface**  (On the left side of the machine-head)
Firmware update for the machine-head (Controller), or other features.
13  Antenna interface
   SL16-K type, impedance 50Ω.
14  KEY interface
   The interface is a 3.5mm stereo jack for connection to manual/automatic telegraph keys.
   Telegraph key connection diagram, as shown:
   Manual telegraph keys, It is necessary to connect "di(滴)"
   And "da(嗒)" together.
15  COMM interface
   Using for the case firmware updates.
16  I/Q Signal output
   The interface is a 3.5mm stereo jack for "I/Q" signal output.
17  ACC
   The interface is an 8-pin mini DIN interface, as defined in the interface definition.
18  DC power interface
   External DC power input interface.
   The round hole is ", the square hole is "+".
19  Ground terminal

The G90 can use a 13.8V external DC power supply. The DC power supply has a current load capacity of at least 10A. The supplied power cord can be used to connect radio and DC power.

When connecting the DC power supply, please carefully connect according to the following figure to avoid reverse polarity of the power supply.

The red wire is connected to the positive pole of the power supply, and the black wire is connected to the negative pole of the power supply.

Note: 黑线（black wire）红线（red wire）;
External power connection

When the G90 uses an external power supply, in order to prevent external interference from entering the radio through the power line or the radio frequency interference in the radio is radiated outside through the power line, we can put the EMC magnetic ring on the power line. Install the magnetic ring as close as possible to the side of the power plug.

- When using an external power supply, carefully check the polarity of the power cord and do not reverse the polarity.
- The limited warranty of this radio does not include damage caused by an external power connection error or damage caused by improper power supply voltage.
Operating

The G90 uses the Quick Mode button operation to use or turn off various functions. All functions are distributed on each function button (or in the second function). All functions are turned on or off or adjusted and displayed or reminded in the corresponding area on the screen.

Interface display as follows:
Hi Dear friends.

In order to let you master the functions and proficiency of the G90 portable transceiver ASAP, please read the operation guide of this manual to understand the powerful functions of the G90. Go ahead now!

**Turn on/off Transceiver**

1. **Turn on:** press кнопка button.
2. **Turn off:** Power on state, Hold press кнопка button1 second.

Turn off screen operation:
In the power on state, tapping the switching Button to turn off the screen display.
The other units are still working.
Pressing any button or turning the Knob will wake up the screen display.
Operating frequency band selection

The G90’s frequency range covers 0.5 to 30 MHz. Amateur frequencies within this range are divided into multiple bands, and band switching can be performed in a number of different ways.

Operation method:
Press the BAND’s < or > button, Switch to the next or previous operating band separately.

- 1.8MHz ↔ 3.5MHz ↔ 5.2MHz ↔ 7.0MHz ↔ 10MHz ↔ 14MHz
- 28MHz ↔ 24MHz ↔ 21MHz ↔ 18MHz

- Each amateur band has a user-defined frequency band that can be used temporarily, when the band is switched, you will see this custom band.
- Whether the 60-meter band is open, it depends on the different laws of different countries (or regions).
- Different versions of the machine have different frequency divisions, depending on the laws of different countries (or regions).
- VFO-A and VFO-B are two independent VFO modes that can be set to different operating states. Check [VFO Settings] please.
Operating mode select

Press [MODE] button. In all modes, according to the following fixed order switching.

- LSB ↔ USB ↔ CW ↔ CWR
- AM ↔ NFM

◆ The FM mode can only be turned on when used with the GSOC controller.
Operating

VOLUME CONTROL

Speaker mode:

Rotate the volume knob left or right to adjust the size of the output volume.

Headphone mode:

- Press the volume knob short to enter headphone mode.
- Rotate the volume knob left or right to adjust the size of the headset volume.

VOX mode on/off:

Press and hold the volume knob for 3-second to turn the VOX feature on or off.
(This feature has not been activated yet.)

- When using the AF in/out Port of the ACC interface, set the relevant volume size in the system menu.
Multifunction adjustment knob

The multifunction knob provides several operation options and can customize features.

**Operation method:**
- **Default:** Stepping of 100 kHz frequency bits.
- **Short press:** Enter SQL item to adjust SQL noise depth.
- **Hold press:** Go to the User Custom feature menu, rotate the main knob to select the appropriate function, and short press the “SAVE” key to determine that the feature is selected.

At this point, the feature is projected onto the multifunction adjustment knob.

**The customizable features are as follows:**
1) Frequency 100k, stepping 100k
2) SQL Level, squelch setting
3) Po Level, transmit power setting
4) Key Speed, automatic key rate setting
5) FFT Scale, spectrum reference level setting
Operating

Adjustment transmitting Po

Operation method:

1. Short press the [Po] button to enter the power setting state, the right side of the screen function display area will display the power settings number.

2. Rotate [multifunction adjustment knob] for power setting with stepping 1W．

◆ When using the G90 transceiver for the first time without understanding the current antenna state, minimize the set transmit power value.
Operating

Set the operating frequency

There are two ways to set the G90 operating frequency, which is to use the main knob and multifunction handle to set the frequency.

Operating method:

1. Set the frequency using the main knob
   - Short press the main knob, select 100Hz, 1kHz, 10kHz Stepper.
   - Rotate the main knob to set the frequency of the current step.

2. Set the frequency using the multifunction handle
   - Press the [F-INP ENT] button on the handle, G90 enter the frequency setting state, the cursor will blink in the first position on the left side of the frequency display bit;
   - Enter the frequency values you want to set, and then press the [F-INP ENT] button again to complete the frequency setting.

For example, set the current frequency to 14.09000MHz, and the key order is as follows:
1. First press the [F-INP ENT] button;
2. Press the 1 4 0 9 0 0 0 number key in sequence;
3. Press the [F-INP ENT] button again, complete the setup.
Operating

Automatic Antenna Tuner

This G90 is integrated with an efficient automatic antenna tuner that can help you quickly set up and debug your antenna.

- Short press the [TUNE] button, will be connected to the built-in antenna tuner, the “TUNE” logo will be displayed at the top of the screen.
- When connected to the automatic antenna regulator, press the [TUNE] button for 1 seconds and the ATU auto-tuning function will be activated.

The receive status is automatically returned when tuning is complete.

Note:

1. Press the [TUNE] button and the antenna icon appears at the top of the screen to indicate that the automatic antenna tuner function is turned on. Just open, the automatic Antenna tuner tuning has not been started.
2. To use the built-in automatic antenna tuner, you must tune once after you turn on the Automatic Antenna tuner feature.
3. If you start the transmission after tuning, the “SWR” icon will appear on the top of the screen and flash, which means that the standing wave of the current antenna is still large and needs to be retuned.
4. When the antenna naturally resonates into the current band, be sure to turn off the Automatic Antenna tuner feature.
5. When using a whip antenna and turning on the built-in antenna tuner for tuning, it is possible to cause strong RF interference to the native or electronic device.
Operating

Function button

Its common functions are distributed on the various function keys. Some function keys have a second function. When the function is selected, turn the main knob to adjust the value.

Operation of the second function:

- Press the [FUNC] button at first, the “F” indicator will light, then press the corresponding function button.
- Press the [FUNC] button again to exit the second function. At this time, the “F” indicator is off.

- In any function (including the second function of FUNC), press the main knob to exit the function settings and return to the main interface.

Operating

Split frequency transceiving operation SPL and VFOA/B settings

There are two independent VFOs inside the G90 transceiver. We can set different frequencies and modes separately. With the SPL function, it is convenient to realize the split transceiving operation.

VFO setting:
1. Press the [A/B / A>B] button to switch between VFO-A and VFO-B.
2. When switching to a certain VFO state, you can set the current VFO’s operating frequency, mode and other settings.

Split frequency transceiver SPL operation method:
1. Set the receiving frequency and mode (VFO-A) first;
2. Then setting the transmit frequency and mode (VFO-B);
3. Operate the second function of the [AGC/SPL] button,
4. Turning on the SPL function to turns on the split transceiver mode.

◆ You can make full use of VFOA/B to set different frequencies or modes, and switch between two frequency points in real time.
Operating

CW communication

Operate with a hand key or an external key controller device.

Operation method:
1. Insert the key body (three-wire) plug into the KEY interface;
2. Press the [MODE] button to switch the mode to CW (or CWR);
3. Open the QSK function in the [KEY] button function and set the appropriate QSK time;
4. Press the CW button to perform CW communication.

Practice mode:
You can use the G90 as a CW code trainer.
The operation method is as follows: In the [KEY] button function, the QSK function is turned off. In this state, when the button is pressed, the transceiver has a CW side tone, but does not emit signals externally.
Operating

CW automatic caller MSG1~MSG3 (Not yet opened, need to be used with GSOC controller)

The G90 host provides 4 sets of CW preset telegraph text storage for automatic call in CW mode.

Operation method:
To be determined
Operating

Standing wave scanner SWR (Not yet opened)

G90 host has an antenna standing wave scanning function, which can scan the standing wave parameters of the current antenna, and is convenient for the user to adjust the antenna.

Operation method:
1. Operate the second function of the [Po] button to start the standing wave scan;
2. After the scan is completed, the scanning process is automatically exited.

◆ The scanning result of the standing wave scanner may have a certain error, for temporary use only. For accurate measurement of antenna standing wave data, use a professional antenna analysis device for measurement.
Operating

Digital filter

The G90 has a built-in variable digital filter that implements a narrowband filter function to improve signal identification.

Operation method:

- Operate the [CMP/F-L] button and the second function of the [NB/F-H] button;
- Rotate the main knob to adjust the lower limit of the digital filter frequency and the upper limit of the frequency respectively until the user experience is appropriate;

- You can adjust the filter parameters according to your own listening preferences to get the best experience.
Operating

Line input/output

The G90 has an external line input interface. When communicating with a computer or an external modem for data communication, the corresponding input/output items should be correctly selected.

Operating method:

◆ In the system menu, using ACC port line input, select: AUX LINE IN. Set the appropriate input volume.
◆ In the system menu, select: AUX AFOUT VOLUM to set the appropriate output volume.

◆ When digital communication is in progress and audio input is made using the ACC port, make sure that the volume of the line input is sufficient.
Channel storage MW, clear MC

Channel storage:
1. In the VFO mode, adjust the required frequency, mode, advanced function status and other parameters;
2. Press the [ MW/MC ] button to start the channel storage operation;
3. Rotate the main knob to select the channel number to be stored, and short press the main knob to complete the channel storage;
4. If the current channel has stored information, using this channel number for storage again will clear the previous channel information and save the current channel information.

Bring up the storage channel:
1. If you press the [VM] button on the panel in VFO mode, you will enter channel mode;
2. Rotate the main knob to switch the current channel.

Clearing channel storage:
1. In the channel mode, operate the second function of the [MW/MC] button to start the channel clear function;
2. At this point, the channel number starts to flash. Rotate the main knob to the corresponding channel number and press the main knob to complete the channel clear.
Operating

*Channel naming TAG (need to be used with GSOC large screen controller)*

Stored channels can be named with "tags" consisting of letters and numbers.

Operating method:
To be determined.
Operating

Boot interface call sign setting CSN

The G90 can set the call sign information displayed on the boot interface.

Operating method:
1. Press and hold the [FUNC] button to go to the system setup menu and select the [CALL SIGN] function to go to the call sign editor;
2. Under the editor, after editing the call sign, save the set text content and return to the normal operation state;
3. When you turn it on again, the boot interface will display the call sign you edited.
Operating

Connect to a computer for amateur radio data communication

The G90 transceiver can be connected to a computer to perform various data communication with the corresponding computer software.

Operation connection method:

- Connect the computer audio output/input to the G90 from the ACC port (MINI-DIN8).
- Insert the data cable into the COMM port, connect the G90 to the computer, and ensure that the computer driver of the data cable is installed correctly. The PC software can control the G90 transceiver;
- Adjust the volume of G90 and the input/output volume of ACC port to the appropriate one. Observe the software interface to avoid the Audio frequency amplitude being too large and unable to communicate.
- Select the corresponding working mode to perform data communication.

- In order to prevent interference, the radio and computer must be well grounded. Please install the EMC magnetic ring for the data cable and audio cable, and install it as close as possible to the radio.
System parameter configuration

Computer control instruction

The G90 uses the standard CIV instruction set. You can use the standard instructions of this instruction set to remotely control the transceiver. It can also be used to configure the control instructions of other software to control the G90.

Band voltage data

The G90's ACC port provides band data for each band. The band data can control the peripheral to automatically switch the band or share the band information with other devices.

Performance parameter

General parameters
Frequency Range: receive: 0.5MHz～30MHz
transmitting: 160M～10M (Amateur radio band only)
transmitting mode: A1A(CW), A3E(AM), J3E(USB/LSB), F3E(FM)
Mini step: 10Hz
Antenna impedance: 50Ω
Range of operating temperature: 0℃～+50℃
Frequency stability: ±10 ppm for 10 to 60 min after power on
Voltage: 10.5～16.5V DC, Negative ground
Electric current: receive: 500mA@ Max
transmitting: 8A@ Max
Case size: 120*45*210mm (W * H * L) (No protrusions)
Weight: about 1.63kg (only case)

Transmitter parameters
RF output power: 20W (SSB/CW/FM)
5W (AM Carrier) @13.8VDC
Modulation type: Digital modulation
Stray radiation suppression: ≥50dB
Carrier suppression: ≥40dB
Mic impedance: 200～10k (conventional 600Ω)

For the above parameters, we may make adjustments without notice.

The operating frequency range of the transceiver will vary with the machine version, please consult your dealer.

Receiver parameters
Circuit type: ZIF
Adjacent channel suppression: ≥60dB
Sideband suppression: ≥60dB
Sensitivity:

appendix 2

CE-19 expansion adapter interface diagram

PTT CON  PTT signal / BAND signal output port. The PTT signal of this port is completely isolated from the host, providing a "low level" trigger associated with the host.

TO XPA125B  XPA12B dedicated interface.

AF CON  Audio input/output port. The audio output from this port is directly output after demodulation, no filter.

DATA CON  Data output port in NFM mode. The two terminals of this port are in parallel relationship and both output the same signal.
